PROFESSIONAL SUMMARY

Technical Solutions Engineer with hands-on experience designing, shipping, and operating AI-powered workflows, SaaS integrations, and customer-facing tools. Skilled at moving ideas from discovery to production: building prompt-driven applications, retrieval-augmented agents, dashboards and data pipelines, and integrations that reduce manual work. Strong track record working embedded with teams and customers to scope builds, validate requirements, and maintain production ownership.

CORE SKILLS

- AI-powered workflow design & prompt systems
- Retrieval-Augmented Generation (RAG) implementations
- Production deployments & release validation
- API, REST & XML integrations
- Data mapping, ETL pipelines, dashboards
- CRM & operational workflow configuration
- Embedded discovery & cross-functional collaboration
- SaaS implementation, onboarding & training
- Troubleshooting, incident response & root cause analysis
- Front-end prototyping: HTML/CSS/JavaScript
- Supabase & Vercel deployments (data + hosting)
- Git/GitHub source control

PROFESSIONAL EXPERIENCE

ARSO Solutions Lab - AI Solutions Engineer & Implementation (2024-Present)

- Partner with business owners to map operational bottlenecks, lead discovery sessions, and translate requirements into phased implementation roadmaps.
- Design and deploy AI-powered workflow applications using OpenAI APIs; build prompt-driven conversational experiences and human-in-the-loop flows to improve decision support and reliability.
- Built a Knowledge Retrieval (RAG) agent on Google Cloud Platform to surface operational content for production workflows.
- Prototype AI use cases and iterate prompt design based on user testing; authored reusable prompt templates and standardized prompt conventions used across products.
- Integrate third-party APIs into SaaS applications and design data flows between business systems; deploy cloud-based integrations using Supabase and Vercel.
- Produce implementation documentation, onboarding materials, and user training resources; prepare customer-facing demos and validate production deployments prior to release.
- Launched multiple AI-assisted products, including an AI-assisted career platform combining conversational data collection, intelligent document generation, and workflow automation.

TouchNet Information Systems

- Implementation Specialist | Customer Success (4 years)
- Led end-to-end enterprise SaaS implementations from discovery through go-live and post-production support; served as primary technical contact for customers.
- Managed 12-15 concurrent implementation projects, planned timelines, coordinated onboarding, and delivered administrator/end-user training.

- Implemented and maintained enterprise integrations with ERP systems (Banner, Colleague, PeopleSoft) using XML and REST APIs; performed complex data mapping and validated end-to-end data flows.
- Configured authentication and SSO integrations; diagnosed and resolved identity/authentication issues during implementations.
- Worked in development, test, and production environments: validated deployments, executed regression testing, investigated production incidents, and coordinated fixes with engineering.
- Integrated payment solutions with customer payment processors and validated transaction workflows through go-live.

Sock101 - Founder & Operations Manager (9 years)

- Founded and operated an e-commerce business; designed scalable processes across sales, inventory, fulfillment, purchasing, and customer service.
- Built and maintained CRM-driven operational workflows (Podio), automated repetitive tasks, and created operational dashboards to monitor performance.
- Developed and managed e-commerce storefronts (Shopify, Volusion), integrated ShipStation and marketplace connectors, and implemented Klaviyo email automation and Google Analytics tracking.
- Negotiated manufacturing and logistics, managed inventory forecasting, and resolved complex customer escalations.

Alliant Techsystems (ATK) - IT Intern to R&D Intern to Project Manager

- Supported enterprise SharePoint deployment and trained users; coordinated engineering testing activities and managed project documentation and schedules.
- Planned and executed live-fire testing operations, collected and validated test data, and authored standard operating procedures to improve engineering workflows.

TOOLS & TECHNOLOGIES

OpenAI APIs, Google Cloud Platform (RAG), Supabase, Vercel, Git/GitHub, HTML/CSS/JavaScript, REST APIs, XML, SSO/SAML, Podio, Shopify, Volusion, ShipStation, Klaviyo, Google Analytics, ERP integrations (Banner, Colleague, PeopleSoft)

EDUCATION

Bachelor of Science - Information Systems / Business Technology

Northwest Missouri State University
